

# Autonomous Mobile Robot (AMR) Product Overview

2024

**At Richmond Rolling Robotics we've partnered with ForwardX, a global leading person-to-goods Autonomous Mobile Robot (AMR) solutions provider, to distribute its next generation products across Australia and New Zealand.**

Our AMR solutions help to reduce operational costs, while improving the overall efficiency in warehouses, retail facilities, distribution centres and manufacturing plants, and represent the most intelligent AMRs available today.

Our exclusive partnership with ForwardX represents a unique opportunity for Australian and New Zealand businesses to invest in the latest equipment to improve their processes and transform their operations.

# Fulfillment

## Workflows

### Piece Picking

Use Flex AMRs for batch picking or discrete order picking of small individual items.

### Case Picking

Use Flex or Max AMRs for larger individual items or case loads of smaller items.

### Pick and Pack

Use Flex or Max AMRs to pick and place items directly into packing containers and apply shipping labels on the fly.

## Your Current Pain Points

### Low Productivity

Rising ecommerce volume means more orders and pieces to pick. The traditional manual methods are slow, labor intensive, and restrictive.

### High Labor Costs

Piece picking requires more space and more labor. Traditional operations spend more money to hire and retain workers, and this results in lower margins.

### Low Efficiency

Wasted movement is wasted time and wasted money. Traditional operations are limited by low efficiency and need smart automation.

### High Error Rate

Manual methods cause errors, and errors waste time and money. Errors also result in a poor customer experience, and error resolution is costly.

## Industries

3PL

Omnichannel

Ecommerce

## Results We Deliver

### Productivity: 2x–3x UPH Increase

ForwardX solutions increase productivity through consolidated workflows that reduce wasted time and increase output. Double or even triple your pickers' units picked per hour by removing insignificant tasks.

### Accuracy: Up to 99.9% Picking Accuracy

Instead of pick lists, f(x) organizes and distributes orders directly to employees. Use on-screen visual directions and onboard RFID scanning, so your workers can pick correctly the first time, every time.

### Payback: ROI in Under 9 Months

ForwardX solutions deliver immediate results. See a marked improvement and financial gain in under 2 weeks, and get a guaranteed return on investment in less than 9 months.

### Efficiency: 60% Reduction in Walking Time

AMRs handle material movements, allowing employees to focus on more important tasks. Reduce traveling, picking, and order reviewing time to achieve more in a shorter period.

### Savings: 50% Reduction in Labor Costs

AMRs address recruitment and turnover issues by increasing productivity and worker satisfaction. Automate repetitive workflows and redistribute your work force to cut your fully burdened labor costs in half.

# JD.com

JD.com chose a ForwardX Max solution for case picking workflows in both B2B retail store replenishment and B2C ecommerce fulfillment. The Max solution consists of Max 600 AMRs to increase picking efficiency and reduce high labor turnover, due to the physically demanding nature of case picking. After the flagship project, over 30 more projects of this nature have been deployed with JD Logistics.

# Distribution

## Workflows

### Piece Picking

Use Flex AMRs for batch picking or discrete order picking of small individual items.

### Case Picking

Use Flex or Max AMRs for larger individual items or case loads of smaller items.

### Pallet Picking

Use Max AMRs to pick direct to pallets.

### Pick and Pack

Use Flex or Max AMRs to pick and place items directly into packing containers and apply shipping labels on the fly.

## Your Current Pain Points

### High Labor Intensity

Distribution environments can be harsh, and workflows can be physically draining. High labor intensity results in errors and worker turnover.

### High Labor Costs

Labor intense work means high labor and recruitment costs. Traditional methods squeeze profit margins and are at the mercy of a growing labor shortage.

### Low Efficiency

Traditional methods are time-consuming and inefficient. Changing logistics network design results in a need for faster and more efficient workflows.

### Safety Concerns

Heavy goods in larger quantities means safety risks, and traditional forklift methods contribute to rising instances of accidents.

# DHL

DHL chose a ForwardX Flex solution to simplify picking and sorting workflows. The Flex solution consisted of a fleet of Flex 300-S AMRs with custom-built racking and f(x) Fleet Manager. The facility supports 600 retail stores with varying delivery frequencies. Increasing productivity, eliminating errors, and decreasing labor dependency was key.

# ITOCHU

ITOCHU Logistics China (ILC) chose a ForwardX Flex solution to automate picking and packing workflows in its Tianjian location. Consisting of a fleet of ForwardX Flex 300 AMRs and f(x) Fleet Manager, the solution was designed to minimize travel, reduce cognitive fatigue, lower labor dependency, and allow for rapid scalability. Onsite deployment took less than 2 weeks, and ILC was able to cut labor costs in half, double its productivity, and reach 99.99% order accuracy.

## Results

**2.13x**

Labor Cost Reduction

# Manufacturing

## Workflows

### Cart Transport

Use Flex L or Max L AMRs for point-to-point cart transportation, such as line delivery, WIP movement, and finished goods.

### Pallet Transport

Use Max L AMRs for point-to-point pallet transportation, such as inbound receiving of raw materials, putaway, and production-to-warehouse movement.

## Your Current Pain Points

### Low Flexibility

SKUs are increasing, and product life cycles are decreasing. This means production lines must change to keep up, but current operations are too rigid.

### Low Predictability

Manual operation lacks predictability due to complicated processes between lines with different cycles. Therefore, large material buffers are required.

### High Labor Costs

Labor intensity is high, turnover is fast, and recruitment and training costs are high. This causes huge labor cost pressures for manufacturers.

### High Error Rate

Complex material requirements and frequent iterations make operations complicated and lead to frequent errors.

Industries

Electronics

Semiconductor

Home Appliance

Results We Deliver

**Reliability: Uptime Availability of 99.5%**

f(x) continuously coordinates the autonomous fleet for hands-free operations and best-in-class uptime. Automate your operations to increase predictability, reducing delays and minimizing your need for manual intervention.

**Efficiency: Cycle Time Reduction**

Reliable workflows improve the cadence of production and reduce waiting times. Meet your demand quicker by reducing start-to-finish production time with fewer delays.

**Flexibility: Changeover Speed Increase**

AMR workflows can be modified in real-time with a simple click. Reduce your changeover times and increase operational agility using f(x)'s map builder.

**Savings: 50% Reduction in Labor Costs**

Automating undesirable work and redeploying workers reduces recruitment requirements and keeps the workforce happy. Use ForwardX solutions to decrease turnover and bring down costs.

**Payback: ROI in <2 Years**

AMRs deliver a return on investment in under 2 years. Instead of waiting 5-10 years for payback, use AMRs for a quick deployment with flexible payment options, without any need for infrastructure changes.

# ForwardX Matrix

## The Flexible Automation Platform

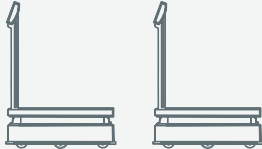

ForwardX Matrix seamlessly connects with your existing software infrastructure. Once WMS is connected, the platform autonomously orchestrates your operations for maximum productivity while offering you deep insight into and control of every inch of your facility.

Top Modules and Add-ons for Smart Warehousing

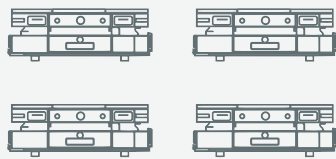

Powered by  
**ForwardX Cortex**

**ForwardX Flex®**  
Visual Autonomous Mobile Robots  
for up to 600kg (1,322 lbs)

Perfect for small to medium load movements like picking, Flex AMRs collaborate with human workers to remove unproductive tasks like long-distance walking and increase the efficiency and accuracy of human work.

**ForwardX Max®**  
Visual Autonomous Mobile Robots  
for up to 2,500 kg (5,511 lbs)

Built for medium to high payloads up to 2,500 kg (5,511 lbs) , Max and Max L AMRs support the automation of multiple workflows across your warehouse including heavy piece, case, and pallet picking.

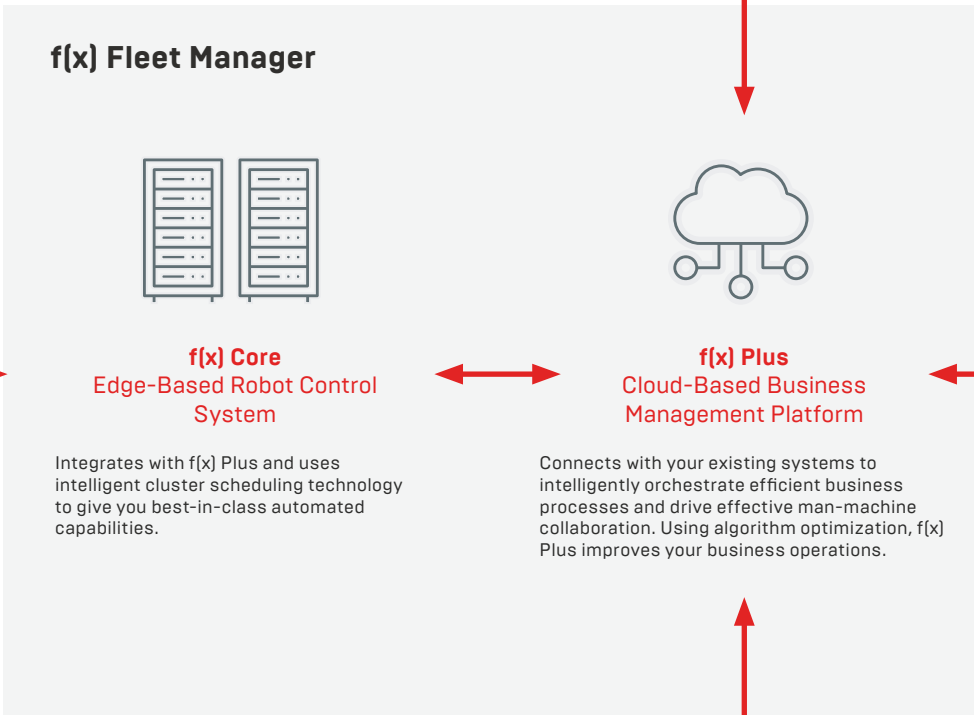

**Your Systems**  
WMS, WCS

Seamlessly connects with f(x) through API integration, transmitting vital data back and forth from f(x).

Integrates with f(x) Plus and uses intelligent cluster scheduling technology to give you best-in-class automated capabilities.

Connects with your existing systems to intelligently orchestrate efficient business processes and drive effective man-machine collaboration. Using algorithm optimization, f(x) Plus improves your business operations.

**Tailored Scenario for Smart Warehousing**

**Other Scenarios (Retail, Health)**

**f(x) Dashboard**  
Desktop Application

Built for management level staff to control operations, track performance, and analyze data, f(x) Dashboard gives you a birds-eye view of your facility.

**f(x) Mobile**  
Mobile Application for PDAs, Smart Watches, and Cellphones

Used by warehouse operators, supervisors, and other staff on the floor, f(x) Mobile improves human performance through directed workflows that help workers focus on value-adding activities.

# ForwardX Flex 60 AMRs

## Flexible and Lightweight AMR

Flex 60-L is suitable for ultra-narrow aisle scenarios and is equipped with lifting and lightweight shelves to meet the small load handling applications in the manufacturing industry. The ultra-narrow body design allows for more flexible transport through the facility, so as to complete tasks efficiently and safely.

Flex 60-S is designed for human-machine collaboration and excels in ultra-narrow aisles. Equipped with RGBD cameras and sophisticated sensors, it boasts exceptional 3-D spatial awareness within 1.5 meters high. Guaranteeing safety and efficiency, Flex 60-S works seamlessly alongside human workers for optimized picking processes. For piece picking scenarios that require an extra level of precision, add on autonomous weighing scales for unbeatable picking accuracy.

# ForwardX Flex AMRs

## Intelligently Reshaping Warehousing and Manufacturing Business Processes

Flex 300-L/600-L are equipped with a lifting function, that when combined with the sensors and cameras allow for autonomous rack position detection and docking. The fully unmanned handling of racks and picking containers reduces personnel involvement and drastically increases efficiency and productivity in the picking process.

The Flex 300-LS is equipped with a lifting function for autonomous rack docking and an interactive touchscreen with customizable UI for operation efficiency improvement.

# ForwardX Flex AMRs

## Intelligently Reshaping Warehousing and Manufacturing Business Processes

Flex 300-S integrates a touch-screen interface directly attached to the AMR. The software can be adapted to users' needs with visuals, bar codes, item quantities, etc.

Flex 300-SCB is the triple decker AMR and can be equipped with optional printers, RFID scanners, and barcode scanners. The three-level design allows employees to organize shipments as they are picked. Simple on-screen instructions and pick-to-light guidance significantly reduces the time it takes to pick, pack, and review every order leading to a drastic improvement in worker efficiency and units picked per hour.

Flex 600-ST is a one-of-a-kind towing AMR. Equipped with an on-board screen for streamlined workflows, and advanced sensors offering complete 360° obstacle recognition, this autonomous tugger is the epitome of safety and efficiency. Let Flex 600-ST handle all the tugging, towing, and pulling, to revolutionize your warehouse operations.

# ForwardX Conveyor AMRs

## Automatic Loading, Unloading, and Docking with AS/RS

ForwardX Conveyor AMRs are suitable for transporting and handling a variety of containers including totes and pallets. They can be incorporated with your existing production lines or automatic storage and retrieval systems (AS/RS).

Our Conveyor AMRs are extensions of our Flex and Max series. Depending on your business needs, these AMRs can be customized to include up to two layers and two rows of rollers, such as one row on the bottom layer with two rows on the top layer.

**Conveyor accessories can be customized according to customer requirements.**

**Flex 300 Conveyor**

# ForwardX Max AMRs

## Point-to-Point, End-to-End Smart Transportation

The Max series brings the flexibility of the Flex series to the larger and heavier goods and materials in your facility, which is suited for pallet- and case-picking for B2B store replenishments and B2C eCommerce fulfillment or heavy-duty material movement at your manufacturing plant.

The Max L series is equipped with a lifting function, that when combined with the onboard sensors and cameras allows the AMRs to autonomously locate pallets or other larger racks and work with forklifts to automate pallet-based receiving, putaway, replenishment, raw material movement, and shipping workflows.

# ForwardX Max AMRs

## Point-to-Point, End-to-End Smart Transportation

Max 1500-L Slim is specifically designed for case picking applications. With full 360° obstacle detection and avoidance, a loading capacity of 1,500 kg (3,306 lbs), highly precise docking capabilities and lifting functions for pallets and racks, it excels in safely and efficiently transporting medium-sized and heavier goods in case picking scenarios.

Max 02500-L supports omnidirectional towing with a maximum load capacity of 2,500 kg (5,511 lbs), capable of operating flexibly in relatively restricted working environments, greatly enhancing the flexibility and safety of production lines. At the same time, the AMR is equipped with a powerful jacking system that can support the jacking of oversized shelves, helping to improve productivity and ease of work.

# Reflex Charging Station

## Smart, Robust and Space-efficient

The ForwardX Reflex charging station serves as a crucial component, providing essential charging support for the fleet. It handles charging tasks with impressive speed and energy capacity, incorporating multiple safety protections to safeguard both employees and AMRs within your facility.

Three available models are compatible with different series of AMRs.

**CS- 30050-S**  
**CS- 30100-S**

**CS- 40070-GD**

**CS-30050-S**

**CS-30100-S**

**CS-40070-GD**

**Dimensions**

Length	600 mm (23.62 in)	600 mm (23.62 in)	600 mm (23.62 in)
Width	300 mm (11.81 in)	300 mm (11.81 in)	300 mm (11.81 in)
Height	285 mm (11.22 in)	285 mm (11.22 in)	285 mm (11.22 in)
Weight	30 kg (66 lbs)	30 kg (66 lbs)	30 kg (66 lbs)
Contact Mount Bracket Length	73 mm (2.87 in)	73 mm (2.87 in)	-
Contact Mount Ground Clearance	95 mm (3.74 in)	120 mm (4.72 in)	10.5 mm (0.41 in)

**Input**

Input Voltage	AC 220 V	AC 220 V	AC 220 V
Input Current	14 A	15 A	20 A
Rated Power	3000 W	3000 W	3000 W
Plug type	GB/T 16A	GB/T 16A	ABC 25A

**Output**

Output Voltage	DC 54.75 V	DC 29.2 V	DC 54.75V
Maximum Output Current	50 A	100 A	70 A

**Environment**

IP Rating	IP20	IP20	IP20
Ambient temperature range	0-40°C	0-40°C	0-40°C
Humidity (non-condensing)	5-85 %	5-85 %	5-85 %

**Safety**

Output Over Current Protection	Yes	Yes	Optional
Output Short Circuit Protection	Yes	Yes	Yes
Output Over Voltage Protection	Yes	Yes	Yes
Input Over Voltage Protection	Yes	Yes	Yes
Input Under Voltage Protection	Yes	Optional	Yes
Output High Voltage Shutdown Protection	Optional	Optional	Optional
Over Temperature Protection	Yes	Yes	Yes
Output Anti Reverse Protection	Optional	Optional	Optional

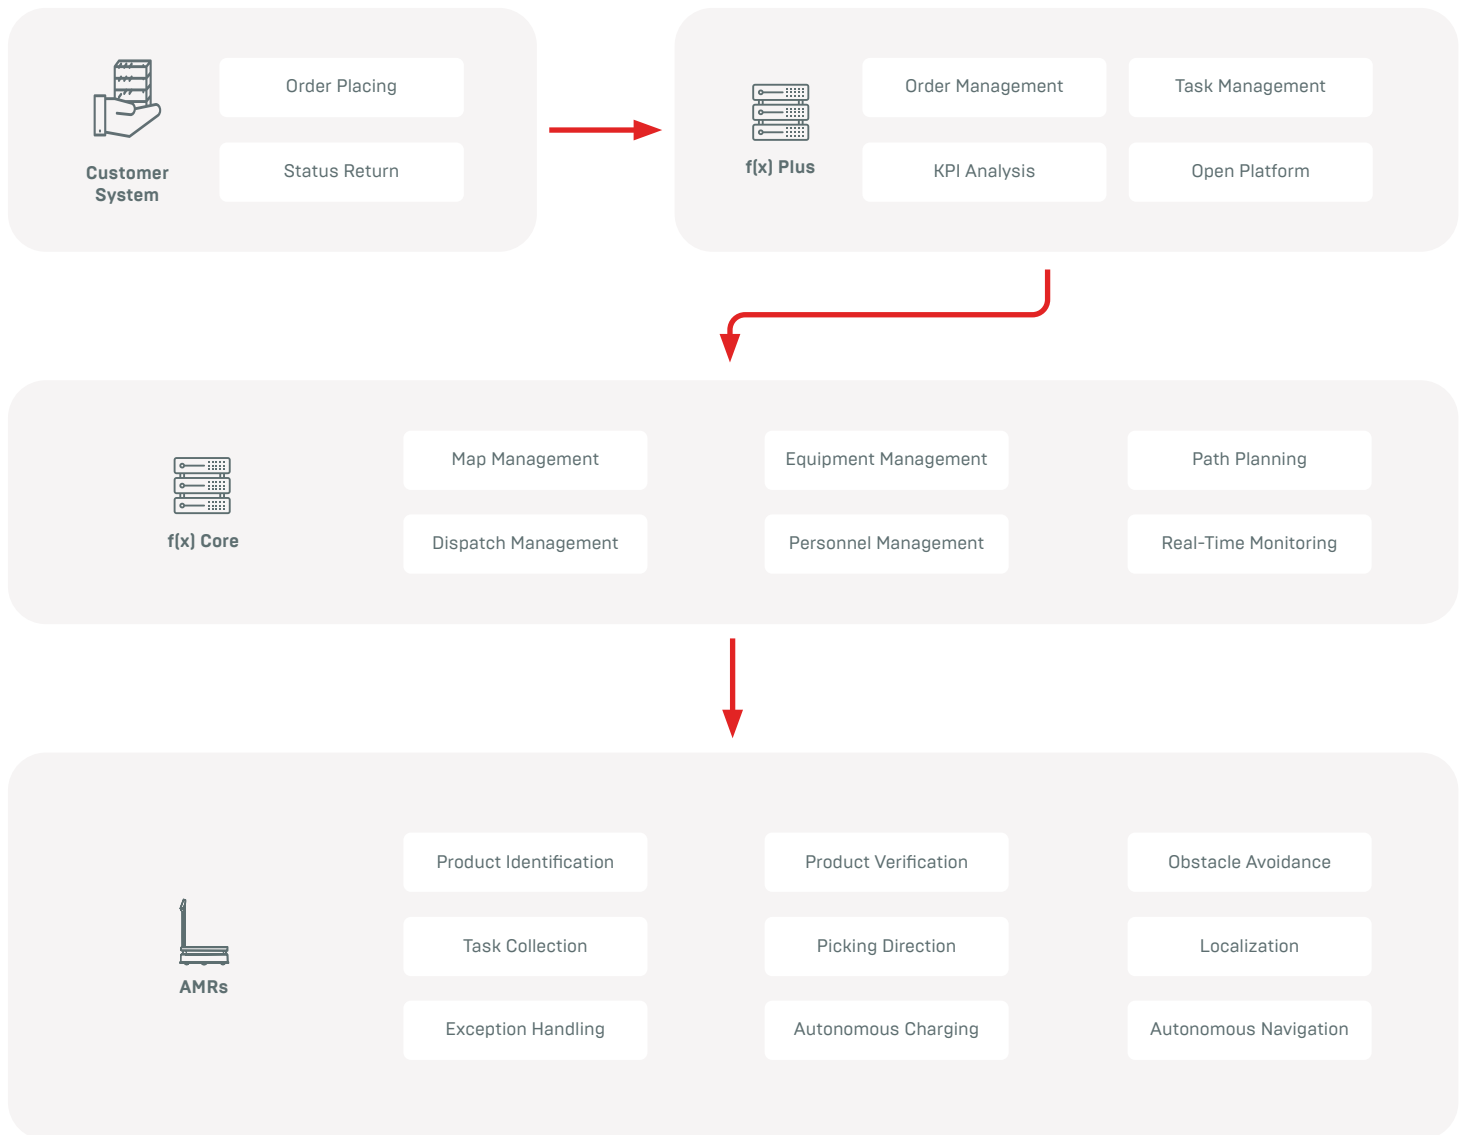

**Compatibility**

Compatible with AMR Series	Flex Series Max Series [Except Max 02500-L]	Apex Series	Max 02500-L Lynx Series

# f(x) Fleet Manager

## Take Control of Your Warehouse

ForwardX f(x) Fleet Manager is an Industry 4.0-compatible solution that provides end-to-end automation and future-proof digitization. Acting as your command center, f(x) Fleet Manager connects with your software platforms to receive, optimize, and dispatch tasks in one central location.

## Key Features

### Unmatched AMR Fleet Capacity

Expand your fleet with no growing pains. Our best-in-class machine learning algorithms ensure your Fleet Manager will intelligently manage and orient your robots to their environment, regardless of robot density, rack density, or picking strategy.

### Traffic & Congestion Control

Relieve congestion and alleviate inefficiency caused by traffic with a truly intelligent solution. Our Fleet Manager provides machine learning-based traffic and congestion control to address bottlenecks, like auto-door delays from required manual intervention.

### Productivity and Efficiency Tracking

Understand how productive and efficient your fleet can be as you watch in real-time. Our dashboards provide customization so that you can see exactly how your fleet operates, helping you make changes where they matter.

### Optimized Battery Management for 24/7 Operation

Benefit from superior uptime effortlessly. ForwardX's Fleet Manager automatically optimizes a battery management schedule to keep your site moving forward non-stop.

### Intelligent Job Assignment

f(x) receives, organizes, and assigns tasks according to your operational strategy. Constantly monitoring and anticipating your operations, f(x) reduces wasted time and movement by using Artificial Intelligence to assign tasks for the best results.

### Automatic Updates

f(x) provides automatic over-the-air updates to every AMR within your fleet to ensure your fleet is up to date with our latest improvements.

### Seamless Integration

f(x) connects to your existing operational systems, such as your WMS, MES, or ERP, without any hassle. Once connected, f(x) circulates tasks across your fleet automatically and in real-time.

### Smart Device Collaboration

If you have elevators or automatic doors in your facility, f(x) empowers your fleet to intelligently interact with and navigate through tricky environments. For example, f(x) allows Flex AMRs to wait for and enter elevators together.

### Optimized Utility

ForwardX solutions are made to be flexible and versatile to enable you to put them to work across your facility. Based on the tasks available, f(x) will ensure that your robots contribute value wherever possible.

### Customizable Dashboards

In f(x), you can customize the way you see data, prioritizing metrics most important to you. With the data constantly at your fingertips, you can create actionable plans to improve your business.

The logo features a stylized red letter 'R' with a grey gear-like shape integrated into its lower right portion. To the right of the 'R' is a grey circle with a white center, resembling a wheel or a gear.
